PROFESSIONAL SUMMARY

Multidisciplinary engineering and operational excellence professional with 25+ years of progressive experience across business operations, enterprise software, data and automation, regulated pharmaceutical manufacturing, and technology management. Applies Pragmatic Synthesis to connect people, processes, technology, and data into practical systems that improve quality, efficiency, compliance, and organizational performance.

PROFESSIONAL METHODOLOGY - PRAGMATIC SYNTHESIS

A repeatable approach that observes the full system, identifies constraints, integrates disciplines, engineers practical responses, validates results, and continuously improves performance rather than optimizing isolated components.

ENGINEERING EXCELLENCE SYSTEMS (EES)

An independent engineering initiative and portfolio that applies Pragmatic Synthesis through connected projects in manufacturing intelligence, industrial automation, pharmaceutical data, enterprise software, digital twins, analytics, and technology management.

PROFESSIONAL VALUE

Combines 25+ years of progressive professional experience with advanced study in technology management to bridge business operations, regulated pharmaceutical manufacturing, software engineering, data, automation, procurement, and operational excellence. This breadth supports cross-functional communication and the translation of complex operational challenges into connected, measurable, and sustainable improvements.

SELECTED IMPACT

46% Operational visibility & productivity	41% Data accessibility & integrity	40%+ Reporting/automation cycle reduction	39% Manufacturing yield increase	28% QA efficiency increase	21% Customer satisfaction improvement
---	--	---	--	--------------------------------------	---

CORE COMPETENCIES

Manufacturing & Quality	Operational Excellence	Software Engineering	Cloud & DevOps	Industrial Automation	Data Engineering & Analytics	Technology Management
cGMP; GMP; Batch Manufacturing; EBR; SOPs; OEE; CAPA; IQ/OQ/PQ; Process Validation; Root Cause Analysis; Change Control; Continuous Improvement	Lean Six Sigma; DMAIC; DMADV; FMEA; SPC; 5S; Value Stream Mapping; Fishbone Analysis; Pareto Analysis; Cross-Functional Collaboration	Java; Python; JavaScript; React; Node.js; REST APIs; SDLC; Agile; CI/CD; Automated Testing; Quality Assurance	AWS; Google Cloud Platform; Docker; Kubernetes; Git; GitHub; DevOps; Deployment Automation	PLC; SCADA; Process Automation; Digital Twins; Manufacturing Analytics; Industrial Control Systems	SQL; PostgreSQL; ETL; Data Governance; Qlik; Power BI; Tableau; Business Intelligence; AI; Spark; Kafka	Systems Thinking; Project Leadership; Change Control; Strategic Sourcing; Cross-functional Collaboration

PROFESSIONAL EXPERIENCE

KENVUE LLC

Processing Operator

Jun 2025-Present

Fort Washington, PA

Strategic Context: Support pharmaceutical manufacturing operations within a regulated cGMP environment, contributing to batch execution, equipment readiness, product quality, documentation integrity, and manufacturing continuity. Cross-functional work with Quality Assurance, Maintenance, and Production strengthens expertise in regulated manufacturing systems, root-cause investigation, and operational excellence.

Selected Contributions:

- Operate and optimize pharmaceutical processing equipment; execute raw-material weighing, measuring, dispensing, in-process quality testing, changeovers, cleaning, and compliant electronic batch documentation to support batch consistency and regulatory readiness.
- Apply root-cause analysis to equipment issues and process deviations while collaborating with Quality Assurance, Maintenance, Engineering, and Production on continuous-improvement initiatives.
- Earned conversion from Kelly Services contractor (Jun 2025-Mar 2026) to full-time Kenvue employee, reflecting consistent performance, adaptability, and contribution to weighing, batching, and processing operations.

REVATURE

Software Engineer | Quality Assurance Engineer

Mar 2022-Jan 2025

Remote

Strategic Context: Developed and validated enterprise software within Agile engineering environments, integrating application development, quality assurance, analytics, automation, and software delivery practices. The role expanded systems-level capability across the SDLC, enterprise application modernization, automated testing, CI/CD, and AI-enabled business solutions.

Selected Contributions:

- Integrated enterprise analytics and generative AI solutions into CRM environments to improve productivity, operational visibility, decision-making, and delivery performance by 46%.
- Built and tested enterprise applications; automated testing frameworks; implemented CI/CD pipelines; and conducted regression, integration, penetration, performance, and root-cause testing across full SDLC workflows.
- Collaborated across engineering teams to modernize ERP/MRP and legacy platforms, deliver multi-device interfaces, and establish engineering documentation and best practices supporting Java, Python, React, and Node.js environments.

Strategic Context: Led data operations supporting logistics, inventory, and production while advancing governance, automation, and reporting. Strengthened the relationship between reliable operational data and faster, more informed cross-functional decision-making.

- Selected Contributions:**
- Improved enterprise data accessibility and integrity by 41% through enhanced data-management systems, validation, governance, and reporting automation.
 - Created, enhanced, and maintained PLC/SCADA automation systems while managing data workflows supporting logistics, inventory, production, and operational analytics.
 - Directed and trained a high-performing data-operations team while leading cross-functional analytics and system-change initiatives that strengthened standardized data-driven decision-making.

Strategic Context: Engineered enterprise data, software, automation, and cloud solutions to modernize reporting workflows and improve technology scalability across distributed environments. The role expanded capability in ETL architecture, cloud migration, DevOps, real-time streaming, industrial automation, full-stack development, and enterprise systems integration.

- Selected Contributions:**
- Reduced reporting and automation cycle times by more than 40% through ETL optimization, workflow redesign, and continuous process improvement.
 - Engineered data pipelines, analytics and reporting platforms, real-time streaming solutions, cloud migrations, PLC/SCADA integrations, and full-stack applications using AWS/GCP and modern DevOps practices.
 - Mentored engineering teams, reinforced coding and deployment best practices, and collaborated cross-functionally to improve software quality, deployment reliability, and operational performance.

Strategic Context: Developed customer-facing digital solutions by combining full-stack development, quality assurance, data analysis, and business intelligence across the software development lifecycle. This experience strengthened the ability to translate business and user requirements into scalable technical solutions with measurable customer value.

- Selected Contributions:**
- Improved quality-assurance efficiency by 28% through testing and process improvements that accelerated software delivery and strengthened product reliability.
 - Developed responsive web applications, REST APIs, dashboards, and data models using JavaScript, React, Node.js, MongoDB, HTML, and CSS to support application functionality and business intelligence.
 - Collaborated with cross-functional stakeholders to translate business requirements into scalable software solutions that improved application integration, functionality, and user experience.

Progressive Business Operations & Procurement Roles

Strategic Context: Progressively advanced through business administration, purchasing, procurement, and operational roles while assuming broader responsibility for customer experience, supplier relationships, inventory, analytics, and business performance. This progression established the operational and commercial foundation that later combined with software engineering, manufacturing, analytics, and technology management within the broader EES perspective.

- Selected Contributions:**
- Improved customer satisfaction by 21% through process improvement, issue resolution, and service optimization that strengthened customer relationships and organizational performance.
 - Directed procurement strategy, supplier negotiations, inventory management, CRM development, business analytics, and operational planning to strengthen supply chain and business performance.
 - Progressed from Executive Assistant to Purchasing Assistant to Buyer to Procurement Manager, demonstrating sustained advancement through increasing responsibility, cross-functional coordination, and continuous operational improvement.

Career-to-EES Connection: The progression above spans business operations, software engineering, enterprise systems, manufacturing data, and regulated production. EES integrates those accumulated disciplines through applied engineering initiatives and connected system thinking.

EDUCATION

Degree	Major Sub-major	School	Academic Accomplishments	Status
Doctor of Philosophy	Technology Management (Engineering Management)	National University, San Diego, CA	3.99 GPA Dean's List	In Progress Started 2024
Master of Science	Information Technology (Project Management)	American InterContinental University, Atlanta, GA	3.93 GPA President's Academic Excellence Award Dean's List Golden Key International Honour Society	Conferred upon Sep 2023
Bachelor of Science	Information Technology (Security & Assurance)	American InterContinental University, Atlanta, GA	3.88 GPA Magna Cum Laude President's Academic Excellence Award Dean's List Epsilon Pi Tau International Honor Society	Conferred upon Jul 2021
Associate of Arts	Business Administration	American InterContinental University, Atlanta, GA	3.96 GPA; Dean's List; Graduated with Honors	Conferred upon Sep 2011

PROFESSIONAL RECOGNITION

- President's Academic Excellence Award - multiple awards
- Magna Cum Laude
- Dean's List - multiple terms
- Golden Key International Honour Society
- Epsilon Pi Tau International Honor Society

PROFESSIONAL SERVICE**American Red Cross**

Mar 2025 - Current

Duty Officer

New Jersey

Strategic Context: Support statewide disaster-response operations by receiving and assessing incident notifications, coordinating communications, and dispatching appropriate Disaster Action Team resources. The role extends systems thinking beyond the workplace through service requiring disciplined communication, operational coordination, sound judgment, accurate documentation, and responsiveness under changing conditions.

Selected Contributions:

- Receive and assess emergency incident notifications throughout New Jersey and dispatch appropriate Disaster Action Team responders to residential fires, disasters, and emergency events.
- Coordinate communications among responders, leadership, emergency services, partner agencies, and affected families while maintaining accurate incident records.
- Support operational readiness and timely deployment of emergency-assistance resources through crisis communication, dispatch coordination, and situational awareness.

REPRESENTATIVE ENGINEERING INITIATIVES

Initiative	Engineering Domain	Applied Purpose
Engineering Excellence Systems (EES)	Connected Systems Engineering	Integrates manufacturing, technology, data, operations, and engineering management through Pragmatic Synthesis.
Power Grid Sun	Energy Systems / Digital Twins	Models power-system behavior and operational data as an upstream intelligence layer for connected control systems.
RC Controls	Industrial Automation	Applies PLC and control-system concepts to connected process monitoring and operational control.
Supply Nexus	Manufacturing Systems	Connects production orders, materials, weighing, processing, hold, packaging, and quality workflows through a manufacturing digital twin.
Pharma Data Nexus	Pharmaceutical Data Engineering	Demonstrates PostgreSQL-based cGMP manufacturing data architecture spanning master, batch, quality, and equipment information.
Manufacturing Operations Intelligence	Operational Excellence / Analytics	Applies manufacturing KPIs, automated data pipelines, analytics, and continuous-improvement concepts to operational decision support.
Manufacturing Asset Health Analytics	Reliability Engineering	Integrates PostgreSQL and analytical workflows to investigate equipment health, sensor behavior, and production anomalies.
Smart Assistant AI	Applied Artificial Intelligence	Explores AI-enabled productivity, knowledge access, system utilities, and human-computer interaction.
Serverless SQL Studio	Data Engineering / Analytics	Provides browser-based SQL analysis and visualization through an interactive data-engineering environment.
GitSafe Practice Lab	DevOps / Engineering Education	Provides a controlled environment for practicing Git workflows, collaboration, branching, merging, and conflict resolution.

CONTINUING THE JOURNEY

My engineering journey reflects a deliberate progression across business operations, procurement, software engineering, enterprise systems, data and analytics, pharmaceutical manufacturing, and technology management. Rather than existing as disconnected disciplines, these experiences collectively shaped my systems-oriented approach to understanding how organizations operate and how engineering can improve them. Engineering Excellence Systems continues to evolve through graduate research, practical engineering initiatives, and the ongoing integration of manufacturing, automation, data, software, and operational excellence into connected solutions that improve how organizations operate, innovate, and grow.
